

Instruction of massive parquet installation and maintenance

DOORS

Exterior doors are protected by special varnishes and paints, that assures high protection against bad weather – rain, snow, high difference of temperature, very high temperature or very low. Doors maintenance does not require special interventions. Doors can be clean of dust with a soft cloth, or can be cleaned with special solutions for wood or with detergents that do not contains ammonia.

Interior doors are painted or oiled in 3 layers and allow cleaning with regular methods: wood detergents, special solutions, without ammonia.

Both for the interior and exterior doors, the garniture provided by us has a high degree of reliability.

Attention! Unlike other similar products, the door butts are of the best quality. Even though, at high period of time, you will have to grease the butts.

WINDOWS

Windows maintenance does not imply special operations. Dust and light dirt can be removed by cleaning with a smooth and well squeezed cloth. Dirt or stains from the window frame can be washed with special solutions for wood or with detergents that do not contain ammonia.

Periodical, the window butts have to be greased.
